Business Analysis Essentials Course: Achieving Project Success

This business analysis course equips participants with a comprehensive introduction to the essential capabilities, knowledge, tools and techniques needed to excel as a business analyst.

Throughout the course, participants will be introduced to a wide range of BA techniques derived from popular approaches including BABOK®, Agile and Scrum. They will be provided with an introduction to the systematic and best practice approach to business analysis, ultimately leading to maximising successful project outcomes.

Course duration

1 session, 8 hours total

Time

9am - 5pm

Format

Face-to-face
or
Online in real-time

Dates

Intended audience

- Anyone wanting to become a business analyst
- Practicing business analysts requiring a solid introductory understanding of a structured, best practice approach to business analysis
- Product owners wanting to extend their knowledge of business analysis best practices
- Process designers
- Business analysis practice managers wishing to gain an understanding of a systematic approach

Upon completion

Every participant receives a University of Sydney certificate of completion.

Aims

This course aims to provide you with a solid introduction to the business analysis capability, its associated practices, and techniques. By the end, participants should have a clear understanding of what the business analysis capability entails. Our goal is for you to leave feeling empowered to contribute to a project as a business analyst, and successfully implement improvements that provide quantifiable benefits to their organisation.

Outcomes

By the end of this course, you should be able to:

- identify problems and opportunities
- describe the objectives of the business analysis capability in an organisation
- describe the benefits of using a systematic approach to business analysis
- elicit, document and prioritise project requirements
- produce a business case
- understand the use of a conceptual solution design
- understand the requirements lifecycle
- describe the purpose of a conceptual solution design.

Content

Topics

- Business analysis concepts
- Project approach selection
- Continued business justification
- Stakeholder management
- Business analysis practices
- Requirements management
- Conceptual solution design
- Risk management

Skills acquired

- Selecting the appropriate project approach
- Produce a business case
- Conduct elicitation techniques
- Facilitate a workshop
- Conduct requirements management
- Problem identification
- Create a conceptual solution design

Delivery style

Workshop format with interactive topic sessions accompanied by participants engaging in group activities to consolidate the knowledge.

Materials

Course materials, including a presentation and a course booklet, are provided electronically.

Organisational training and development

This course can be delivered as a private session for groups, and tailored to meet the needs of your business. Contact us to discuss our range of organisational training solutions.
